

**LISTERIOSIS UPDATE SEPTEMBER 10, 2008**

NEWS

September 10, 2008  
2008/nr-063

The Ministry of Health and Long-Term Care's listeriosis update as of Wednesday, September 10, 2008.

# Total cases as of Sept. 10, 2008	# confirmed cases	# cases under investigation
40	33	7

# deaths among confirmed cases	# deaths where listeriosis was an underlying or contributing cause	# deaths where cause is undetermined
16	13	3

The number of deaths among confirmed cases has increased because a case previously under investigation has been reclassified as a confirmed case.

**QUOTES**

"The public health system continues to be vigilant for potential new cases of Listeriosis because of the long incubation period of the disease," said Dr. David Williams, Ontario's Chief Medical Officer of Health. "The general public, especially those at high risk, should continue to take precautions and ensure that no recalled products are being consumed. When in doubt, throw it out."

**QUICK FACTS**

- The average age of confirmed cases is 76.
- Almost all confirmed cases with complete information live in an institution or were hospitalized prior to the onset of the illness. Three confirmed cases were not hospitalized or did not reside in an institution prior to the onset of the illness, and a small number of confirmed cases have information pending.
- The incubation period for Listeriosis is from three to 70 days with an average incubation period of three weeks.
- Listeriosis is a reportable disease under Ontario Regulation 569 of the Health Protection and Promotion Act.
