
LISTERIOSIS UPDATE SEPTEMBER 23, 2008**NEWS**September 23, 2008
2008/nr-075

The Ministry of Health and Long-Term Care's listeriosis update as of Tuesday, September 23, 2008.

# Total cases as of Sept. 23, 2008	# confirmed cases	# cases under investigation
44	36	8

# deaths among confirmed cases	# deaths where listeriosis was an underlying or contributing cause	# deaths where cause is undetermined
20	14	6

There are three additional cases that are now under investigation.

QUICK FACTS

- The average age of confirmed cases is 77.
- Almost all confirmed cases with complete information live in an institution or were hospitalized prior to the onset of the illness. Four confirmed cases were not hospitalized or did not reside in an institution prior to the onset of the illness, and a small number of confirmed cases have information pending.
- The incubation period for Listeriosis is from three to 70 days with an average incubation period of three weeks.
- Listeriosis is a reportable disease under Ontario Regulation 569 of the Health Protection and Promotion Act.
